Poromet™
Cleanable Stainless Steel Elements

Poromet filter elements are designed to easily install in most commercially available vessels. Made from 316 stainless steel, this series of cleanable elements stands up to the most challenging fluid filtration applications. Whether it is high-temperature, highly corrosive or it’s just too costly to maintain with throw-away elements, the Poromet series offers an affordable, durable, reusable solution. Exceeding the competition’s performance, Poromet elements can lower your costs by providing longer on-stream life, minimized disposal costs, and years of trouble-free service. Expect durable, easy to clean, absolute filtration when you trust your process to Poromet.

THE BOTTOM LINE

- Superior Quality at Reduced Cost
  Our exclusive electron beam welding process provides superior product quality at reduced costs. Heat distortion, oxidation and sensitization are eliminated. These are issues that can lead to element breaches, allowing contaminants to bleed downstream. Don’t risk costly downtime, replacement costs for faulty elements, and wasted product. Install Poromet elements today.

- Lower Energy Costs
  Poromet cores are designed to withstand pressures up to 250 psid. Electro-polishing removes all metal burns allowing filtered fluids to pass through the elements with less friction and turbulence, reducing energy usage.

- Extended Service Life
  Poromet pleated elements have over twice the filtering area as competitive elements. Expect more time between element changes and cleaning, translating into less operation and maintenance expenses.

APPLICATIONS

- Resins
- Petroleum Feed Stocks
- Waxes
- Amine
- Petroleum Oils
- Glycol

- Caustic
- Acids
- Water
- Chemicals
- Beverages
- Distillates

SPECIFICATIONS

MATERIALS

- MEDIA 316 stainless steel wire cloth
  POROPLATE® cylindrical
  POROMESH® pleated
  POROFELT® pleated depth

- END CAPS 316 stainless steel
- CORE 316 stainless steel
- GASKETS buna-n
- OPTIONS end treatments, gasket/o-ring materials

OPERATING DATA

**MEDIA**

**POROPLATE® MEDIA**
A self-supporting medium made from multiple layers of woven wire cloth, sintered into a rigid, porous metal structure. POROPLATE elements are cylindrical, surface-type filters that are perfect for back-flushing and repeated cleaning. Because Poroplate elements are self-supporting, expensive filter support cores are eliminated.

**POROMESH® MEDIA**
Multiple layers of diffusion bonded wire cloth are pleated to maximize filter area and on-stream life. Poromesh media captures contaminants on the upstream surface of the filter element, where it is easily cleaned or back-flushed.

**POROFELT® MEDIA**
Microscopic, stainless steel fibers are random-laid and sintered in our proprietary diffusion bonding process. The media is then supported between two or more layers of wire cloth and pleated. Porofelt depth media traps particles deep within its complex pore structure. Porofelt elements provide finer filtration, with optimum dirt-holding capacity and permeability.

**PARTICLE RETENTION**

- Efficiency: Absolute
- **POROPLATE Grade [µm]**: 10, 20, 40, 70, 100, 150
- **POROMESH Grade [µm]**: 10, 20, 40, 70, 100, 150
- **POROFELT Grade [µm]**: 3, 5, 10, 20, 40

**NOTES**

1. Max D.P. may be limited by the vessel manufacturer’s design.
2. Poroplate elements can be cleaned & reused in accordance with PECOFacet procedures. Contact the factory for more information.

**VESSELS**

- PECO series 55, 65, RFF
- Pall
- Parker
- Purolator
- Others
